

PHASE A: 1-Page PRD

Product Requirement Document

Project: Gamified Financial Literacy Platform

1. Product Vision

Build a gamified web and mobile platform that teaches practical financial literacy through simulations, interactive challenges, and behavioral nudges. The platform converts financial education into applied habit-building.

2. Target Users

Primary: Students 13 to 25 years

Secondary: Young professionals 21 to 30 years

Tertiary: Schools and colleges for curriculum integration

3. Problem Statement

Most young people lack practical financial skills. Traditional financial education is theoretical, boring, and disconnected from real-life decisions. This leads to poor saving habits, debt traps, fraud vulnerability, and low investment participation.

inshort (Fraud-Safety , Investment/Money/credits Planning or management)

4. Core Features

- Interactive Financial Simulations

Budgeting game, loan decision & SIP investment & credit score impact Courses.

- Gamification Layer

XP points, level progression, achievement badges/certificates, leaderboards.

- Personalized Learning Path

AI-driven recommendation engine based on user performance.

- Fraud Awareness Modules(courses)

Scenario-based phishing and UPI scam detection training.

- Progress Dashboard

Financial literacy score and behavioral improvement tracking.

5. Success Metrics

- Daily Active Users
- Completion rate of modules
- Improvement in financial literacy score
- 7-day and 30-day retention rate

6. MVP Scope for Hackathon

- 3 core modules
 - Budgeting
 - Investment
 - Fraud awareness
- Basic gamification
- User login
- Progress tracking

That is your tight PRD. No fluff. Clear build direction.

PHASE B: Hackathon-Level TRD

Technical Requirement Document

1. System Architecture

Frontend:

HTML/CSS/JS or React + Vite For
Greate Responsive PWA design

Backend:

Node.js with Express

Database:

MongoDB

Encrypted user data

Hosting:

Vercel for WEB-Hosting

2. Core Modules Architecture

User Module

Authentication

Profile management

Progress tracking

Game Engine Module

Scenario logic

Score calculation

Progression system

AI Recommendation Module

Rule-based for MVP

Future-ready for ML integration

Analytics Module

Track user behavior

Score computation

3. Data Model

User Name

UserID

Email

Password

Age group

Learning progress

XP score

Course-Module

ModuleID

Difficulty level

Completion status

Scores

UserID

ModuleID

Score

Timestamp

4. Security

JWT authentication

HTTPS enforced

Hashed passwords using bcrypt

Database encryption at rest

5. Scalability Plan

Microservice-ready architecture

Stateless backend

This TRD is hackathon sufficient and expandable.
